

About Zebulon Solutions:

We're an old-fashioned company providing modern productization solutions. We help our customers transform their R&D projects into manufacturing ready products. Our services include:

❖ Productization Services

- Product Design
- Analysis
- Industrialization

❖ Productization Management

- Program Management
- Fractional Executive
- Business Consulting

We may start from a napkin, a spec, a prototype or even a product in limited production, but we end with a product that is fully industrialized, cost optimized and manufacturable.

Pale Green Zebulon:

As a young company we do what we can to operate green:

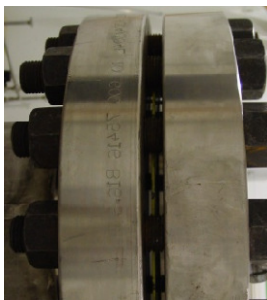

- ❖ We keep the heat turned way, way down
- ❖ We celebrate St Patrick's Day
- ❖ We drive Chuck's Prius to meetings
- ❖ We do many—way too many—conference calls
- ❖ We recycle, or at least most of us do
- ❖ Zeb rides a horse to work, or would if he could

Nothing to be all that proud of but it's a start.

Deep Green Zebulon:

On the other hand, a big portion of our core business is helping our customers productize some really deep, lush, *save the planet* green products. Products that use CO2 rather than produce it. Products that help industries pollute less. Complex clean-tech products that need a lot of effort, a lot of expertise to realize, to make manufacturable.

We don't own any green IP; we don't lobby for subsidies. We do take those ideas and help turn them into products that can be manufactured, products that have a supply chain. We redesign, we test, we optimize, both for manufacturability and cost. The clean-tech industry is still in its infancy, and with 100+ product launches under our collective belts we can provide *been there, done that* experience to help transform these world changing ideas into world changing products.

Real clean-tech productization examples include supply chain optimization, manufacturing setup, design for manufacturability analysis, DFMEAs, business plan generation, interim CFO and COO gigs, design assessments and global program management.
